Versatile Email Filing - Fast!

Do you know **exactly** where all of your emails are?

Can you **index** your emails by key words in the messages?

Does your corporate email system **file all incoming and outgoing emails**

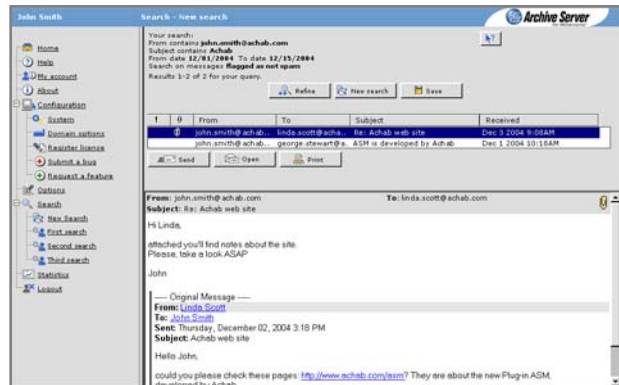

- **Automatically?**
- **Securely?**
- **Confidentially?**

Today, emails have legal status: retrieving exactly what was written means controlling the situation. You just can't risk losing or accidentally deleting a message. Do you really have the time to call technical assistance every time you cannot find something? Or, even worse, do you really enjoy asking your clients to resend a message because **you cannot find their email?**

With *Archive Server for MDAemon*, you know **exactly** where all of your emails are. You can retrieve them **quickly** and you will not lose messages among the thousands.

You can locate essential emails by combining several search parameters: words within the message body, date range, recipient, Subject contents, and/or sender. With a couple of clicks you can search through all of your correspondence, easily locating the message you need. You can then view the message, transfer it to your inbox, print it, or forward it to any email address you specify. Even **retrieving attachments** and saving them to your PC is a breeze.

On the corporate level, everyone can retrieve their emails without calling technical assistance. All incoming and outgoing emails are **filed automatically, securely, and confidentially**. Accounts and authorizations are handled flexibly and ensure the privacy of users.

Archive Server for MDAemon offers an **advanced search system**, to retrieve stored messages.

Users can locate essential emails by combining several search parameters: sequence of words, date range, recipients, subject matter, and senders.

It's also easy to retrieve **emails deleted** from the email client.

Who needs it?

You need email to negotiate business, accept and place orders, send classified documents. But **what does your email need?** A **versatile archive** where all messages are saved in secure files with quick access for every system user.

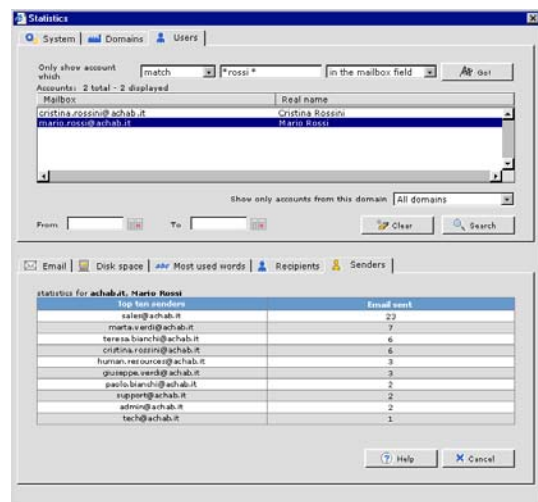

Archive Server for MDAemon is also:

- **Ready to use** by all *MDAemon* users with a web browser - you don't need to install or configure anything on network computers.
- **Easy to use** - no training is required.
- An *MDAemon Standard* and *Pro* plug-in - not only is it **easy to install**, it will not overload your email server.

Many companies are **legally required to file their email** and respect privacy laws.

With *Archive Server for MDAemon* you **manage your data legally** until it needs to be deleted. Your data will remain **complete** and **secure**, so each user's **legal rights are respected**.

Archive Server for MDAemon is a versatile archive where messages are saved in secure files with quick access for system

The Administrator has at his disposal **several kinds of statistics**, about the system, the domains and users.

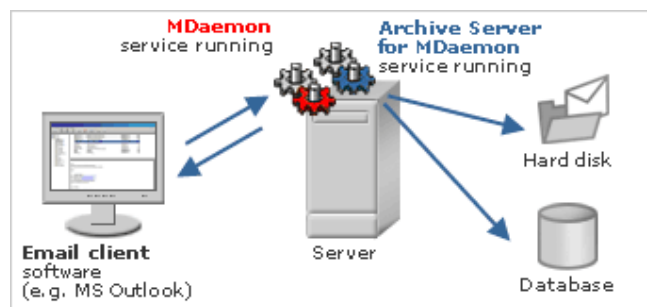

The picture shows statistics about a user: **top ten senders** who most messaged the selected user.

How *Archive Server for MDAemon* works

Archive Server for MDAemon is an **MDAemon plug-in** that must be installed on the server where *MDAemon* mail server is running.

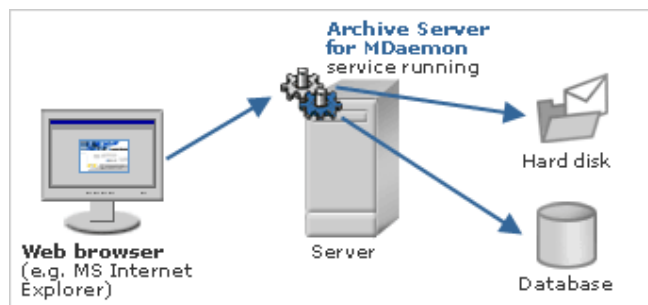

MDAemon and *Archive Server for MDAemon* work together. *Archive Server for MDAemon* copies all inbound and outbound emails into the archive and indexes them in the database, while the email client interacts with the *MDAemon* mail server.

Users **don't need to do anything** different: *Archive Server for MDAemon* automatically files all emails.

The process of archiving emails.

The picture below displays the message retrieval process: users access the Archive Server from within their web browser. They can locate emails by combining several search parameters and **send** the message to their own inbox or **forward** it to another user. Even **retrieving attachments** and saving them is a breeze.

The process of retrieving email from the archive.

Features

Archive Server for MDAemon is software designed to archive your email securely and automatically. It combines unprecedented characteristics of **power and flexibility**, making it a **unique** product of its kind.

Ease of use

Archive Server for MDAemon can be **downloaded and installed** in less than **15 minutes**. After installing it on your server, it is immediately ready to use:

You can search the email archive by key words, dates, senders, recipients, body text and subject of the email

- **You don't need to install** or configure software for **network users**;
- **Users don't have to do anything different at all**;
- The users **search** directly using their web **browser**;
- **Archiving email is automatic**.

Search

Archive Server for MDAemon's main function is searching for and retrieving emails. You can search the email archive by **key words, dates, senders, recipients, body text and subject** of the email or any combination thereof.

You can also decide if you want to search through messages flagged as spam, and if you want to include messages with attachments in your search.

The **search** can even be made on **emails that have been deleted** from your own computer.

Administration

The system is completely administered through the browser. The administrator's access credentials for logging in to Archive Server for MDAemon are provided during installation.

The **System Administrator** has **control over all** Archive Server for MDAemon settings, as well as control over individual user rights and settings.

Configuration parameters for Archive Server for MDAemon give the administrator a high degree of **personalization** and discrimination in granting user rights.

A **Domain Administrator** can be appointed for **each domain**. This administrator can access the configuration for their specific domain only.

Archive Server for MDAemon is especially attentive to privacy issues and safeguarding personal data

User rights

Archive Server for MDAemon lets you grant **differing rights** to individual users. When you decide to archive a domain, the emails are archived with the same settings for all domain users.

You can **decide whether messages** should or shouldn't be **archived for each user**. You can even decide whether or not a specific user should have **access to the system**. You can also grant a user the right to **search one or more** domains handled by the MDAemon server and the right to **search other users' messages**.

Security

Archive Server for MDAemon is especially **attentive** to **privacy** issues and safeguarding personal data. This is why by default, each user can perform searches **exclusively on his or her own email**. Furthermore, users **are not** required to have a separate **username and password** to log in to their own email archive. They just type in the same credentials they already use for logging in to their own mailbox.

Auditing

Auditing is the procedure that aims to safeguard users' privacy. Since Archive Server for MDAemon lets the administrator **grant** users the **right to search** messages belonging to **other users**, you can enable a **notification** mechanism so that the users know **which messages have been seen**, by whom, and based on which searches.

If you want to optimize disk space, you can have the audit logs automatically deleted after a certain number of days.

Spam

You can configure *Archive Server for MDAemon* to archive emails flagged as **spam**, so that you can check them later.

You can even set up your own *MDaemon* server so that messages flagged as spam are not sent directly to the users. Instead, they are **archived** in *Archive Server for MDAemon* where they are **available** to each user for review.

Spam can be **automatically deleted** from the system after a certain number of days, so that each user **does not have to delete** the spam messages **manually**.

Exclusion lists

A*rchive Server for MDAemon* checks all the words found in the subject and body of email messages and archives them in a database where it indexes them so you can search by key word.

Some **words** (such as articles that, a, the, etc.) **are not useful** when searching through emails. If you are looking for an email invitation to lunch it makes no difference if the email contains the expression “an invitation to lunch” or “that invitation to lunch”. The significant words are “invitation” and “lunch.” So, insignificant words **can be excluded** from the database by **compiling an exclusion** list of words to skip.

This way, the database is **optimized** and the **performance** of the search system is enhanced.

Statistics

A*rchive Server for MDAemon* **maintains statistics** on email use on the server level, on the domain level, and on the user level. Statistics can include: number of **emails sent and received**, the **most frequent words**, the **most active users**, and the disk space used on the server. Based on each user's rights, you can display only the data concerning your own email box, the activity in your domain, or activity at the email server.

System Requirements

SERVER SIDE

Operating System

Windows 2000 Pro/Server, Windows 2003, Windows XP Pro

RAM

256 MB (512 MB if database is installed on the same computer)

CPU

Pentium III 800 MHz or higher

Web Server

IIS 5 or higher or Xitami (included in setup)

Disk Space

20 MB for Archive Server for MDAEMON (100 MB if also installing MSDE 2000) plus the space for the email archive storage

MDAEMON Standard or Pro, v7.0 or higher

DATABASE

One of the following:

- Microsoft SQL Server 7 or 2000
- Microsoft SQL Server Desktop Engine (MSDE) 7 or 2000 (included in the Archive Server installation file)

CLIENT SIDE

Web Browser

Microsoft Internet Explorer 5.5 or higher

Operating System

any version of Windows supporting Internet Explorer 5.5 or higher (Windows 9x / ME / NT / Win2k / XP / 2003)

Pricing

All prices are in Canadian dollars and do not include applicable taxes. Prices can change without prior notice.

All prices include **one year of Upgrade Protection***.

It is necessary that the number of users of *Archive Server for MDAemon* matches *MDaemon's*.

| Available licenses | Price |
|---|-------------|
| Archive Server for MDAemon 6 users | \$ 345.00 |
| Archive Server for MDAemon 12 users | \$ 471.00 |
| Archive Server for MDAemon 25 users | \$ 598.00 |
| Archive Server for MDAemon 50 users | \$ 725.00 |
| Archive Server for MDAemon 100 users | \$ 980.00 |
| Archive Server for MDAemon 250 users | \$ 1,235.00 |
| Archive Server for MDAemon 500 users | \$ 1,528.00 |
| Archive Server for MDAemon 1000 users | \$ 1,908.00 |
| Archive Server for MDAemon unlimited users | \$ 2,291.00 |

* Upgrade Protection gives you the right to **use the latest version** of the product **without any additional cost**, during the term of the Protection period. Please note that *Archive Server for MDAemon* will continue to function normally after Upgrade Protection term expires. An additional year of Upgrade Protection can be purchased.

Download & Purchase

To ensure sure that Archive Server for MDAemon meets your needs, download it now and test it for **free for thirty days**.

<http://www.ccsoftware.ca/mdaemon/asm>

If you like what Archive Server for MDAemon can do for you, just purchase the activation key before the trial period is over. You can convert your current trial version into the fully operational version, with everything already in order. You won't have to reinstall a thing. And, if you decide to purchase after your 30-day free trial, you can convert your trial version without reinstalling it so that the system never misses a beat.
